WBF02-Q		Horizontal			

Kit includes: Sturdy steel frame, poplar slats, mounting brackets, pistons, legs with connecting bar and mattress retaining bracket.

## Operating the wall bed

For installation guide, see [www.impekk.com](http://www.impekk.com)

The wall bed is assembled and shown in lowered and locked position. Install piston with weight label at the top.

2

Pivot the leg towards the inside of the unit. Make sure leg is fully closed.

3

Push down on the middle of the bed to unlock the piston. Repeat this operation when you wish to lock the wall bed.

4

Pull up gently to close. Leg serves as mattress retaining system. Pistons insure that door closes properly and remains closed.

Impekk offers a limited warranty on slat bases used in the wall bed as well as the mechanisms. The warranty covers the replacement of parts with manufacturing defects and/or breakage caused by regular use. It does not cover damages caused by a poor installation or misuse of the product. Professional installation suggested. The bed must be secured to the wall into wood or metal studs.
